Overview of Order Management

The Order Management application on H-DSN provides suppliers and Harley-Davidson with visibility to material information. Suppliers also have the ability to send Advanced Ship Notices (ASNs) to Harley-Davidson. This application is given to all users having an H-DSN logon. Any user not requiring Advanced Ship Notice capability can have the functionality turned off by their H-DSN Administrator.

To access Order Management, an H-DSN logon is required. To obtain a logon, contact your H-DSN Administrator or register on www.h-dsn.com. For additional information, please refer to the *Overview of H-DSN* document.

Prior to using Order Management, it is highly recommended that the online tutorials and user guides on the Tutorial & User Guide web page be reviewed. All training is done online and at the users own pace.

Order Management can be used as a supplier's primary or back-up EDI system. Suppliers currently using an integrated EDI system should continue to use it as their primary EDI method.

- **Visibility to Material Information**

    o **Plan Visibility**
      Visibility to planned orders or planning schedule (EDI 830) for:
        - Original Equipment (OE)
