Overview of H-DSN

The Harley-Davidson Supplier Network (H-DSN) web site (www.h-dsn.com) has been developed to strengthen the overall relationship between Harley-Davidson and its suppliers. The long-term vision of the Harley-Davidson Supplier Network is to become a supplier's web-based, single point of contact for doing business with Harley-Davidson.

- **Registration**

  On-line registration is available using this web site to request H-DSN activation and online training for pre-approved Harley-Davidson suppliers.   There is a 12 business day requirement for activation, set up and testing of new suppliers.

  To register for activation and training, you will be required to enter your Harley-Davidson "Supplier ID". This is typically a five digit alpha-numeric identifier. Upon successful completion of the registration process, you will receive a confirming email message. Upon final completion of your supplier activation, you will be provided with a username and password for access on www.h-dsn.com.

- **Central Point of Contact**
  It will be expected that each supplier organization identify an H-DSN Central Point of Contact (CPOC). This individual will be responsible for defining and managing the H-DSN users and access levels for the supplier organization. It will also be the responsibility of the CPOC to communicate within the supplier organization regarding the self service capabilities on the Supplier Network.

- Applications available within H-DSN

  - Online Tutorials and User Guides for self-service training
  - Administration (Password resets and user set up & maintenance)
  - Payables (Invoice and Payment tracking)
  - Supplier Profile Manager
  - Part Drawings
  - Engineering & Cosmetic Standards
  - Supplier Performance
  - Planning Schedules

The Harley Davidson Supplier Network is one of the foundational tools that will enable Harley-Davidson and the supply base to conduct business in a more efficient, timely and collaborative fashion. We encourage your feedback on improvements to the training and the system.
